**Quality Glass  
Balustrades**

*Product Brochure 2022/2023*

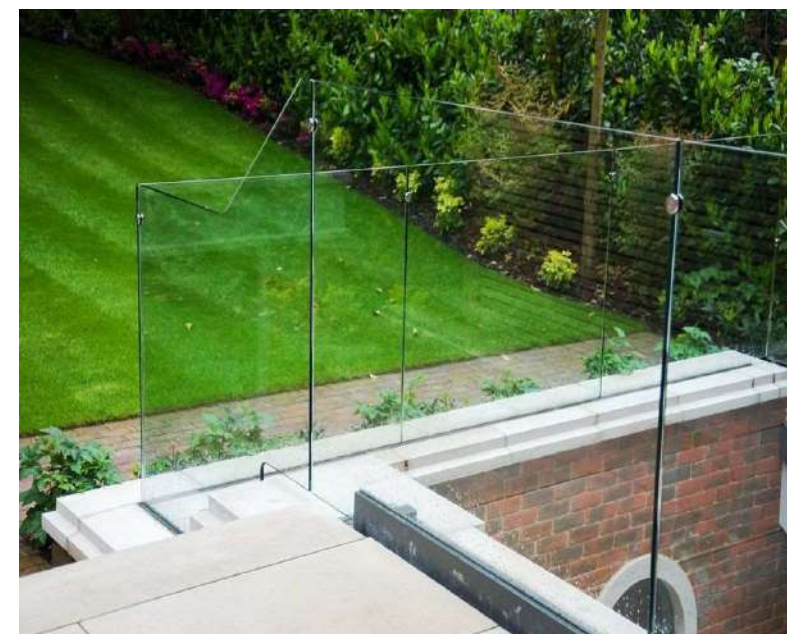

Quality glass balustrades and architectural glass produced from the highest quality glass and metalwork from the best UK manufacturers. Our balustrades are made to measure for both trade and retail projects.

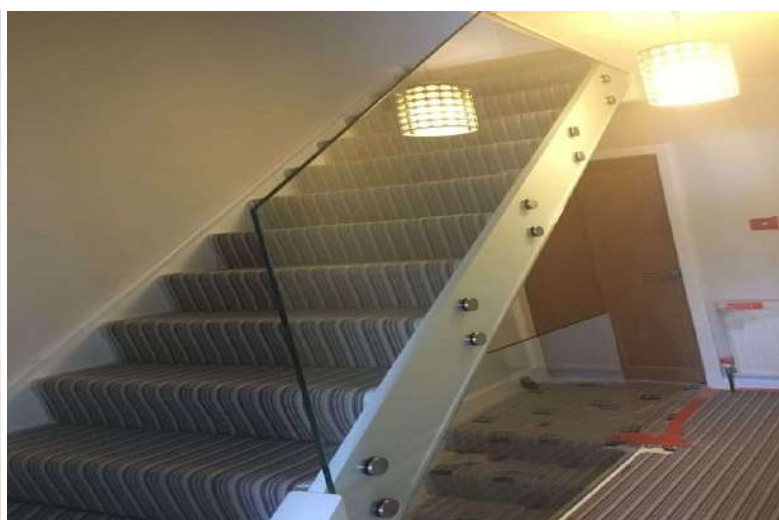

Glass balustrades are an increasingly popular product supported by an extensive range of options and fixing methods available.

Balustrades are suitable for both internal and external applications, such as stairways, landing, garden and roof terraces, Patios and Pool Areas.

Glass balustrades & partitions can be specified, with or without framing, stainless steel finished fixings and even no handrail, all bearing in mind current building regulations.

Glass balustrades can be used internally, whether home or office and externally too with the same minimalist look.

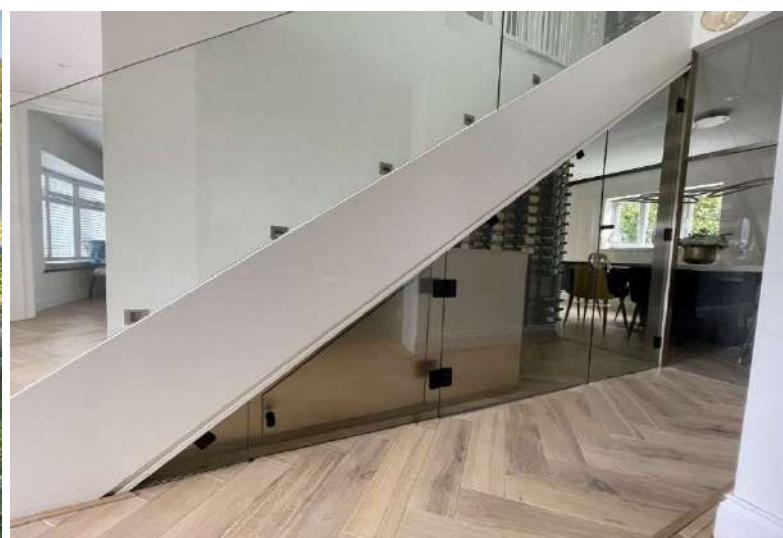

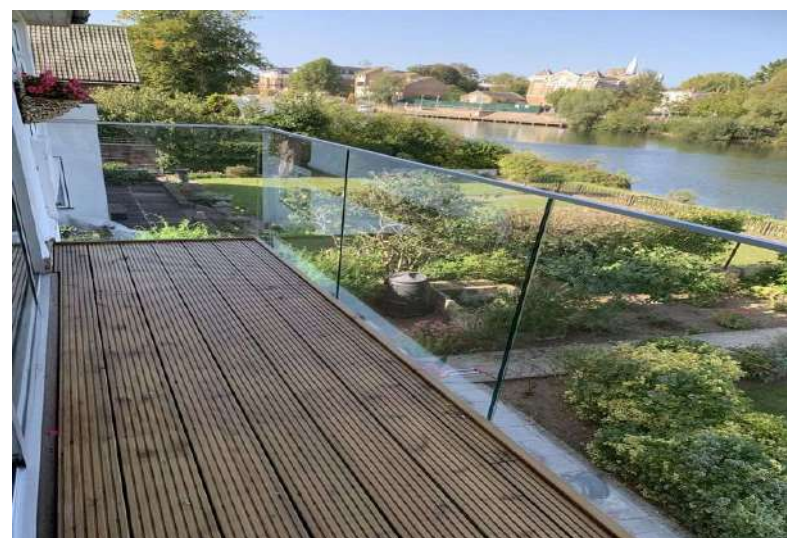

This product can be shaped and made to fit their intended placement on-site, can have a number of styling options applied, such as a frosted finish for privacy and can be installed with a wide range of fixings.

- Balustrades are available in a variety of options but the important differences are: 1- Framed (handrail required) or 2 - Frame-less (no hand-rail required).
- Balustrades with no fall arrest (handrail) require the glass to act as a fall arrest and therefore the glass will need to be toughened laminated glass, (typically 13.5mm and 17.5mm thickness).
- Framed balustrades (or balustrades that utilise a handrail as the fall arrest can be produced using toughened glass only (typically in 8,10 or 12mm).

The choice of whether to have a framed or frame-less balustrade will usually be down to aesthetics only and the customer's preference. However, in some instances the type of balustrade and site layout may also affect the options available.

**We also supply and install glass for other Architectural solutions, such as:**

**Doors, Roofs, Floors, Partitions & Enclosures:**
